Q1. Read the following paragraph.

(5m)

The Great Barrier Reef is the largest coral reef in the world. It is off the coast of Queensland, in northeastern Australia and it is 2000 m long. The Great Barrier Reef is not just one reef; it is almost 3000 reefs and islands.

The reef is a beautiful underwater garden. The corals that form the reef are very colourful. Corals are built by very tiny animals that can only survive in warm, clean sea-water with lots of light. Even more colourful than the corals are the fish that live in the reef. They can be viewed clearly from a glass bottom boat or by snorkelling or diving.

The Great Barrier Reef is one of Australia's most popular vacation places. More than two million people visit the reef each year, so it has to be looked after very carefully. In many places people are not allowed to fish. Luckily, the fish and other animals on the reef are so interesting that most people are happy just to look at them!

Answer the questions.

1. Where is the Great Barrier Reef located? _____
2. What is the reef made of and how are they built? _____
3. How can we see the fish in the reef? _____
4. Why is there a need to protect the reef? _____
